

OFUZOR UGOCHUKWU IKECHUKWU, GMCPN

Lagos, Nigeria | uofuzor72@gmail.com | +234 913 423 3166 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full Stack Developer and Computer Science graduate (Babcock University, GMCPN) building secure, compliance-aware frontend applications for financial products. Shipped React/Next.js interfaces integrated with payment processing (Paddle) and backend REST APIs, with hands-on regulatory exposure as CTO of a fintech compliance platform built around Nigeria's NDPA 2023. Independent discovery of CVE-2025-55182 (CVSS 10.0) and hands-on penetration testing of authentication/session flows sharpen how I design secure application code.

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript, TypeScript, Tailwind CSS, HTML/CSS

Security & Compliance: Secure Authentication & Session Management, OWASP Top 10, NDPA 2023, Burp Suite, Kali Linux, Nmap

Backend & Integrations: Node.js, Express.js, REST APIs, Payment Gateway Integration (Paddle), WebSockets, Python, Flask, FastAPI

Databases: PostgreSQL, Supabase, MySQL, MongoDB

Infrastructure: GitHub Actions (CI/CD), AWS, Docker, Vercel, Azure, Kamatera

PROFESSIONAL EXPERIENCE

Frontend Development Intern | KDALinks Technologies — Lagos, Nigeria

Jan 2025 – Mar 2025

- Contributed frontend UI work under an existing engineering team's codebase and review process, run concurrently with independent security research — first exposure to shared, non-solo development.

INDEPENDENT PROJECTS

Co-Founder & CTO | Verity — AI Fintech Compliance Platform

2026 – Present

- Architected an AI-powered transaction-monitoring compliance platform for Nigerian fintechs and microfinance banks by building a local/on-prem ML inference pipeline (migrated from cloud APIs to vLLM) to meet NDPA 2023 data-residency requirements, as technical co-founder responsible for API architecture and ML pipeline.
- Built a working prototype and pitch deck by translating CBN data-localization and NDPA compliance mandates into product architecture, positioning mid-size fintechs and MFBs as beachhead customers.

Founder & Product Engineer | Revertii (personal project)

Jul 2026 – Present

- Built and shipped a privacy-first subscription-tracking PWA end-to-end (React, Node.js/TypeScript, PostgreSQL) by architecting a renewal-interception engine and integrating Paddle payments, OneSignal push notifications, and a 200+ service directory — live in production on Vercel.

Trading Systems Developer | NexusQuantAI (personal project)

Nov 2025 – Jul 2026

- Built an automated MT5 gold-trading system running eight concurrent strategies — including ML-based trend and veto/reversal models — by designing a GitHub Actions CI/CD pipeline and Azure/Kamatera deployment, achieving real-time equity and per-strategy performance tracking.
- Re-architected the core trend model onto an H1 50 EMA session-direction forecast by validating live market data through the pipeline before order routing.

Independent Security Researcher | Vibemap Penetration Test

2025

- Led a full-lifecycle penetration test as scoping and remediation lead by validating exploits and delivering a remediation report, uncovering stored XSS and missing authentication rate-limiting on session/login flows while confirming IDOR/ownership checks held across every tested endpoint.
- Discovered CVE-2025-55182 (CVSS 10.0) by independently identifying a critical vulnerability affecting an estimated 236 Nigerian organizations.

EDUCATION & CERTIFICATIONS

BSc. Computer Science | Babcock University, Nigeria

Oct 2022 – Jul 2026

Second Class Upper Division — CGPA 3.8/5.0 (Highest Sessional GPA: 4.44/5.0)

- GMCPN – Graduate Member, Computer Professionals Registration Council of Nigeria
- Cisco Certifications: Introduction to Cybersecurity, Networking Basics
